Annual Report  
To the Dursley Rural District Council  
Annual Report of Medical Officer of Health

Population in 1901	11,636
Area in Acres (land only)	26,521
Inhabited houses	2,753
Estimated population to July 1905	11,411

The District consists of eleven parishes viz, -  
Barn, Coaley, Dursley, Kingswood, North Nibley,  
Nympsfield, Owlpen, Slimbridge, Stinchcombe,  
Uley and Wotton under Edge.

Inspector of Nuisances  
Mr. William Webb

Wresden, Uley.

To the Chairman and Members of the Rural District Council

Gentlemen,

Description of District The Rural district of Dursley is situated on the sides and buttresses of the Western Cotswolds which hills geologically consists almost entirely of white-lime-stone. A lot of clay and marl lie in the valleys and runs to considerable distance up the hill sides with here and there a bed of gravel.

Streams of the District Many springs of bright clear water rise at the foot or on the hillsides which unite in their respective valleys, and so form the streams of the district; the chief among which are the Barn, the Nibley brook, the Dyels brook, the Alderley-brook and the Wickwar-brook.

The Cam drains Uley, Dursley, Cam and the greater part of the parish of Coaley it empties itself into the Berkeley and Gloucester Canal in the parish of Slimbridge through which parish the canal passes.

The Ribley-brook drains the greater part of the parish of North Ribley and discharges into the Matford-brook.

The Dyers-brook drains Wotton under Edge, the Alderley-brook the Alderley part of the parish of Wotton under Edge, these unite at, and drain Kingswood and joins the Little Avon.

The Wickwar-brook drains only a small and remote part of the parish of Kingswood, and is chiefly important as forming a boundary between this Rural district and the Shipping Godbury and Thornbury Rural Districts.

These streams are not used for domestic purposes except, I am informed, the Ribley brook in its upper part is used by one household.

The villages which make up the district vary; some are fairly compact while others are scattered, and are built on the hill sides or on the abutments which run out to different distances in the Valley of the Severn.

Nympsfield is the only village situated on the top of the hill and this from 700 to 800 ft above sea level; and Slimbridge is the only village wholly situated in the valley, so that for the most part the district is naturally well drained.

House House accommodation is fairly well provided for in the district except in Cam and Dursley.

We inspected during the year one hotel, one public-house, one farm-house, two villas, and one

cottage, in all six. These are all of a very good class.

There are but few back-to-back houses in the district but many of a class little or no better from a sanitary point of view, I refer to those cottages which have no door or window in the back to provide light and thorough ventilation. With regard to sufficiency of open space about the dwellings of the working-classes there is little to complain about. And on the whole the surroundings are kept in a fairly sanitary condition.

Housing of the Working-classes. No action was taken under Part I or II of Housing of the Working-classes Act 1890. But under Sec 46 of the Public Health Act 1875 re cleansing and limewashing "to prevent infection disease", three were taken in hand and cleansed and limewashed.

Supervision is exercised by Your Board in the erection of new buildings under the provisions of the bye-laws with respect to new streets and buildings in that portion of the sanitary district which comprises the contributory place of Dursley, and under this head three plans of new buildings have been examined and passed by Your Board, in accordance with the provisions of the said bye-laws.

In other parts of the district new cottages and dwelling houses are inspected by us under Sec's 21-25 re house drainage in one we found the house sanitary drain going into a water course instead of a cesspool, one, no house drain, Secs 35-36 re ash pits, and in new privy or closet accommodation, Two had no ash pit, one no closet, and Sec 159 re conversion of old structures into dwelling houses Public Health Act

*[The page contains extremely faint, illegible handwriting, likely bleed-through from the reverse side. The text is arranged in approximately 25 horizontal lines across the page.]*

1875. No inspection under the above provision and also water supply under sec 6 Public Health (Water) Act 1878. Under the last section three samples of water were examined, two were found satisfactory and one suspicious. Four water certificates were issued under the above section.

**Sewage and sewers** The sewerage system of Dursley and Cam was completed during the year and formally handed over to the Sanitary Committee of the Dursley Rural District Council on Nov 30<sup>th</sup> of last year. At a total cost £14,339. Dursley's share of cost being £10,068 and Cam £4,271.

To complete the above a further loan was asked for, and a Local Government Board enquiry held in the Victoria Hall, Dursley, presided over by Col. A. J. Hepper D.S.O., R.E. at which objections were heard on Feb 23<sup>rd</sup> of 1905 the total amount granted being £4,767.

**House connections** The house connections completed to the new sewers at the end of the year were 101.

The process of completing the connections is still going on in both Dursley and Cam.

**Sewers of Wotton** Wotton under Edge has no proper sewerage system, but much has been done by laying sewers under the main streets and repairing the gutters of the same to improve the appearance of the town, many loose stone drains and not a few cesspools have thus been done away with in and about the centre of the town, which must have greatly improved its sanitary condition.

The sewers were left very improperly ventilated during the year this has been greatly improved.

All the improvements have been carried on out of the rates.

The sewers in the other parts of the district are both short and small, almost all the old ones are constructed of loose-stone. All new ones are laid in socketted pipes.

But little sewage enters the ham until it reaches Dursley and this is being taken out as fast as the house connections with the new sewers can be carried out.

All the sewers of Wotton under Edge empty into the Dyer's brook.

The sewage which finds its way into the other streams of the district is but small in quantity, and what excrement is not water borne is collected in cesspools, pail-closets or privies.

There are a great many pail-closets in Wotton under Edge. Some in Dursley - these will be fewer in process of time; water-closets being substituted; and some in other parts of the district. But in by far the most common method of collecting it, is by the old fashioned privy with large vault of which the more one sees the more one disapproves.

These are usually emptied once a year by the occupier. Cesspools are usually emptied by the occupier.

Leaving in Dursley the pail-closets are emptied once a week by the public scavenger who removes at the same time the house refuse.

At Wotton under Edge the same method is carried out once a week by the public scavenger. In the ham the public scavenging done amounts to removal of house refuse only, and this is done

once a week.

The Public scavengers of the district are appointed by your Board.

In all other parts of the district what is done is done by the occupier or owners.

water supply The water supply of the district is as follows; -  
Coaley has possessed a water supply of its own for thirty years or more, and was the first in the district in order of time,

Then Kingswood, then Wotton under Edge, then Dursley and in a small way Bam.

Bam for the population and work carried on is about the worst off for water of any of the villages in the district, and it is difficult to find a sufficiently large spring to fix upon, which one could advise should be utilized as a water supply.

All the remaining parishes are supplied by springs, deep or shallow wells, some with many without pumps.

All these water supplies are under the control of your Board.

There have been 28 new connections made with public supply during the year.

quality of water All the water in the district is more or less hard, but for the most part it may be said to be fairly well supplied with wholesome water.

rainfall 1905 The Rainfall of 1905 was some inches below the average and in some parts notably Wotton under Edge the water supply was obliged to be regulated with great care.

Common lodging houses.

under the bye laws relating to common lodging houses we made in Wotton under Edge four

inspections during the year, two in April and two in November.

With regard to the one in the Cloud we were obliged to bring to your notice various sections of the said bye-laws which were contravened. These have been complied with since.

There is no common lodging house in Dursley.

#### Slaughterhouses.

Between Oct 6<sup>th</sup> and 20<sup>th</sup> we visited and inspected all the slaughterhouses in the district, the total being 28. Of these six are situated in Dursley and were inspected under the bye-law relating thereto.

We found all both in Dursley and the district were kept in a satisfactory condition.

There is a movement to bring into force bye-law relating to slaughterhouses in the whole district; that is, investing the Rural District Council with Urban Powers &c relative thereto. But at present the machinery is incomplete for the carrying out of such provisions.

#### Dairies, Cowsheds and Milkshops.

There have been 46 inspections of the Dairies, Cowsheds and Milkshops during the year. Four cases of infectious disease occurred at dairies in the district, being three of scarlet fever at a dairy in Kingswood, and one of erysipelas at a dairy in Dursley. Every precaution was taken to prevent the spread of disease, and one has no reason to doubt but that these were effectual in so doing.

#### Factory and Workshops Act 1901.

During the year the Inspector under the above act has registered 40 Factories, 68 Workshops including

retail bakehouses and laundries, and one outworker. And the inspections made by us to the above are 40 visits to Factories; 99 visits to Workshops and one outworker. With the following results under the various sections of the Act viz:—

(S 2(1)) Cleanliness five cases were found where there was a want of cleanliness, and all remedied.

(S 2(1) 7) Ventilation; - good in all.

(S 2(1) 3) Overcrowding, not any.

(S 2(2)) Nuisances effluvia from drains &c. Two were found and remedied.

(S 8) Drainage of floors, good.

(S 14) Means of escape from fire, - satisfactory.

Retail bakehouses.

(S 97) WC's &c's Ashpit cistern drains. No case found.

(S 98) Fitness on sanitary grounds, one found and remedied.

(S 100) Sleeping place on same level. No case.

(S 101) Whether underground and certified.

No underground bakehouse in the district.

(S 133) Failure to affix abstract of the Factory and Workshop's Act. Not any.

Matters referred by H. M. Inspector of Factories One.

Reports (of action taken) sent to H. M. Inspector One.

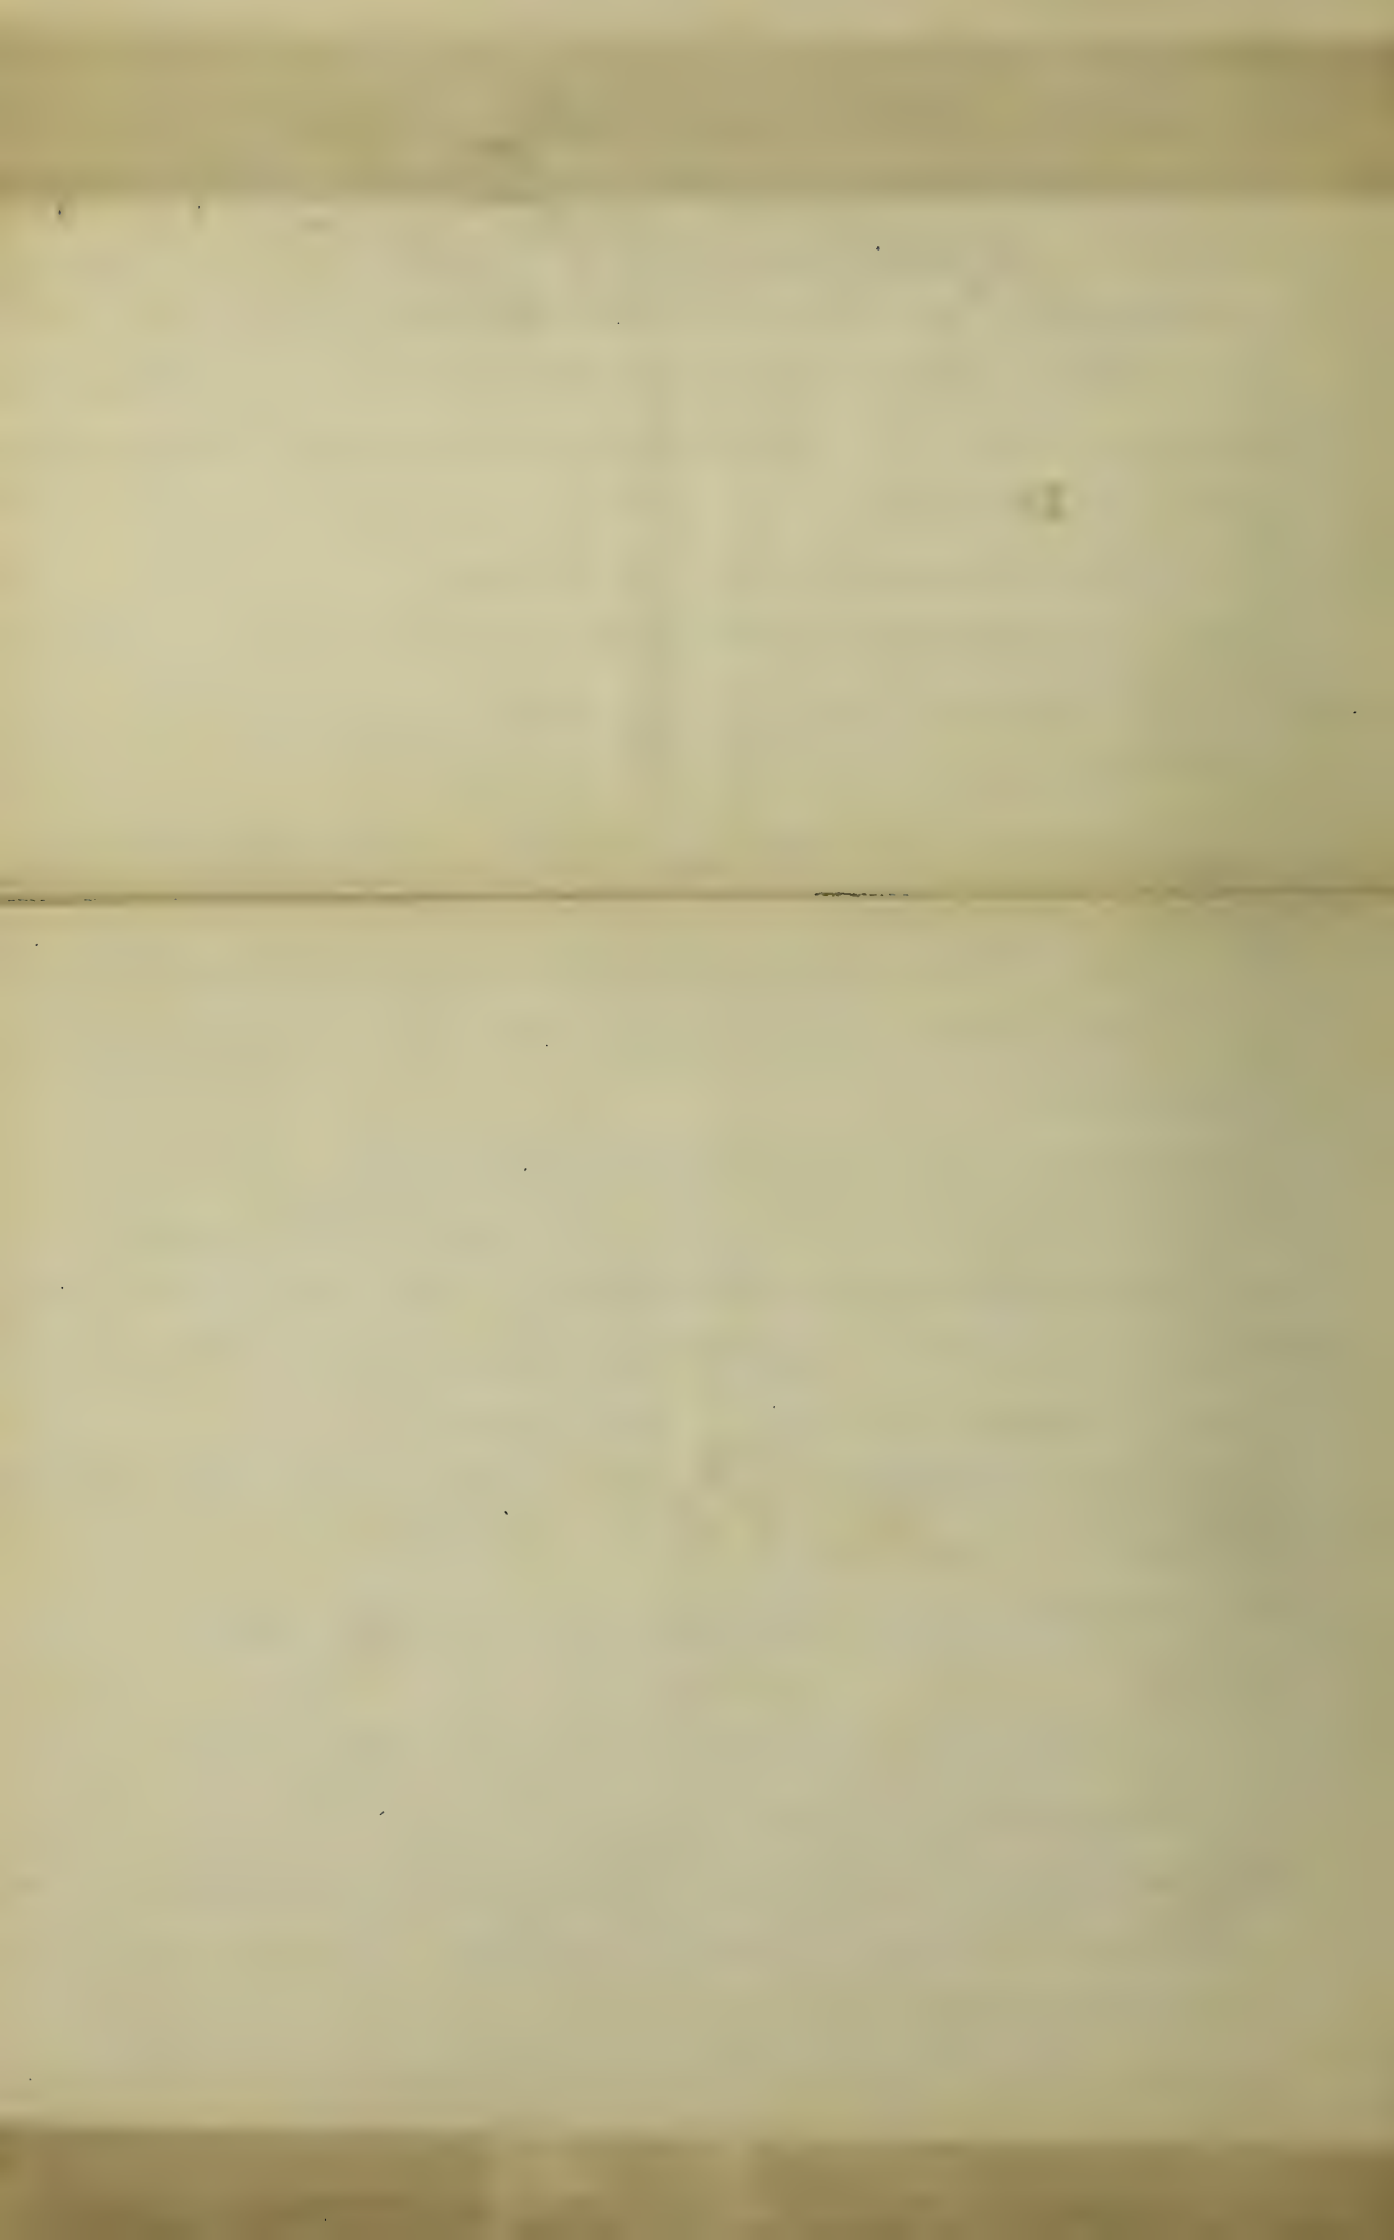

(S 107) List of outworkers received, One.

Outworkers, One.

No case of dangerous infectious disease was notified in any house, where homework was done during the year.

Under Sec 91 Public Health Act 1875. 70 nuisances were visited and inspected and 70 were abated.

Sundries. Under this head is included a number of visits made to Committee meetings, Sewage Works. Inspections of places before house connections are made. Visiting out parts of the district in relation to infectious diseases not notifiable &c. Prosecutions - there was one prosecution during the year. Attendance at meetings of the Council were five during the year.

Table III The Infectious disease Notification Act 1889. Under the above act there were 17 cases notified during the year, (as against 49 in 1904) there were 7 of scarlet fever, 5 of Erysipelas, 4 of Diphtheria and one of Typhoid fever. Of the several districts, there were 5 in Dursley 2 in Uley, and 10 in Wotton under Edge. Of the respective parishes, there occurred in Dursley one of scarlet fever, one of Erysipelas and one of Typhoid fever. In Uley one of scarlet fever. In Wotton under Edge one of scarlet fever, two of Erysipelas and two of Diphtheria. In Kingswood three of scarlet fever and one of Erysipelas. In North Nibley one of scarlet fever. In Nympsfield one of Diphtheria. In Slimbridge one of Diphtheria, and in the Workhouse, - a casual; of Erysipelas. No case occurred in Cam, Coaley, Stinchcombe nor Cowpen.

Of the seasons of the year six were notified in the first quarter, 2 in the second, 7 in the third and 2 in the fourth.

Dangerous Infectious Sickness.

There have been during the year 115 cases of dangerous infectious sickness entered in the District Medical Officer Relief books.

All notifiable were duly notified.

There were 58 cases of Influenza, 26 of whooping cough, 11 of diarrhoea, 4 of gastritis, 1 of measles, 4 of erysipelas, 9 of Phthisis, 2 of diphtheria and one of acute enteritis.

Of these various maladies 30 were registered in the Dursley district and Workhouse.

Ten in the Uley district and 75 in the Wotton under Edge.

Measles and Whooping cough are not notifiable in this district.

Means taken to prevent the spread of disease.

1. All notifiable diseases, where there is urgency are visited by Dr. Webb or myself as early as possible after the receipt of the notification certificate.
2. The Inspector sends at once printed instructions relating to isolation disinfection &c to all cases.
3. Disinfectants are supplied to people in humble life.
4. In all cases where there is a child or children attending a school or schools from an infected home, there is forwarded memorandum (6) giving information as to the nature of the infection in such and such household, - to the managers, master or mistress of such school or schools as early as is convenient.  
Of these three were forwarded.
5. When the infected person has recovered, the house thoroughly disinfected and cleansed, it is inspected, if satisfactory a certificate is forwarded of "proper disinfection" to the aforesaid School Authorities.  
Of these two have been forwarded.

6. In 1904 your Board passed a resolution authorizing disinfection after cases of Phthisis. Of these 4 houses have been disinfected.
7. There have been three Public Elementary Schools disinfected after there had been good reason for suspecting infection. Two after whooping cough and one after measles.
8. The closing of schools in consequence of the prevalence of dangerous infectious disease in accordance with memorandum of the Local Government Board Dec 1890.

The British School at Wotton under Edge was closed from Jan 1<sup>st</sup> to 28<sup>th</sup> in consequence of whooping-cough.

The National School Stinchcombe from Jan 7<sup>th</sup> to 7<sup>th</sup> Feb 18<sup>th</sup> in consequence of measles and whooping-cough.

The Blue School Wotton under Edge from Jan 7<sup>th</sup> to 28<sup>th</sup> also the Chipping, Wotton under Edge for the same period of time, in consequence of scarlet fever and whooping-cough.

The girls, boys and infants schools, Cam. from Jan 7<sup>th</sup> to Feb 11<sup>th</sup> on account of the prevalence of measles and whooping-cough.

The Public Elementary (National) School Dursley from Jan 13<sup>th</sup> to Feb 4<sup>th</sup> in consequence of whooping cough.

The National School Dympsfield from Jan 6<sup>th</sup> to Feb 1<sup>st</sup> in consequence of measles.

The Victoria Day Schools, Dursley from Jan 17<sup>th</sup> to Feb 4<sup>th</sup> in consequence of measles and whooping cough.

The Board School Kingswood from March 4<sup>th</sup> to April 1<sup>st</sup> because of the prevalence of whooping cough.

9. Removals to Isolation hospitals.

There have been two removals to the Moors one of scarlet fever from Dursley, and one of

Diphtheria from Alimbridge. and one case of Diphtheria was sent in error to Stroud Infection Hospital from Nympsfield.

#### 10. Bacteriological Diagnosis.

Bacteriological diagnosis was made in one case, that of Typhoid fever - with negative result.

#### The Isolation Hospital.

This is situated at Coaley in the sub district of Uley, it is intended for small pox only, and is capable of accommodating four persons.

#### Breakheart's Hill Isolation Hospital site.

The above is still unoccupied owing to the difficulty of finding a sufficient water supply without a very great outlay. It is still in the possession of your Board, and let to a tenant. So that it is not quite idle, and yields some interest on the outlay.

#### Vital Statistics.

The Official Account of the population of this district in the census year 1901 determined it to be 11,636 which was lower than it had been estimated for that year.

The estimation of the population to the middle of 1905 has been calculated on the proportional loss between the census years 1891 and 1901.

So that it is estimated to be 11,411, and almost all the calculations are based upon the estimated population.

Table II This estimation of the population apportioned to the Dursley District and Workhouse a population of 5,142.

To the Uley District a population of 1,826.

To the Wotton under Edge district a population of 4,443.

The births registered in the whole district are

262 of these 138 are males, and 124 females with a birth rate of 22.9 per thousand of estimated population living at the middle of the year, this is called "the crude birth-rate", in 1904 it was 23.2 for the County of Gloucester 22.9 and for all England and Wales 27.9. So that the birth rate is still decreasing.

For the different districts it is as follows for the Dursley district 125 births, birth rate 24.3.

For the Uley district 38 births, birth rate 20.8.

Wotton under Edge district 99 births, birth rate 23.2.

Table IV. The deaths registered in the District during the year are 155 of these 4 were strangers who died in the Workhouse: but 6 persons died outside the district in Public Institutions who belonged to the district. So that the net deaths belonging to the district are 157. with a <sup>net</sup> death rate of 13.7. This is called the "general death-rate". Of these 72 were males and 85 females. The death-rate for the district in 1904 was 13 for the County of Gloucester 13.2 for all England and Wales 16.2. The deaths and death rates for the different sub districts are Dursley district and Workhouse 68 death rate 13.2.

Uley district and Workhouse 26 death rate 14.2.

Wotton under Edge district and Workhouse 67 death rate 15.

The deaths in the advanced period of old age are from 70 to 80 thirty, from 80 to 90 twenty two. 90 to 100 two.

### Infant Mortality.

The deaths registered in the district under one year are 25, and the rate of Infant Mortality is 95.4 this is the number of deaths under one year per 1000 births. In 1904 the death rate was 71.4, for

The bounty of Gloucester it was 96, for all England and Wales it was 146.

The rate for Dursley and district is 11.2

The rate for Uley and district is 26.3

The rate for Wotton-under-Edge is 101.01.

Table V. Table V. deals with deaths from stated causes in weeks and months under one year.

also certified and uncertified deaths in the district.

There was no uncertified death registered in the district.

It also for the first time takes note of legitimate and illegitimate births, of these the legitimate were 250, illegitimate 12.

Zymotic disease.

The seven principle zymotic diseases are Small pox, measles, scarlet fever, Diphtheria and croup, whooping cough, Fevers and Diarrhoea, and caused the death of 6 persons during the year. The zymotic death-rate is 0.52.

Five died of whooping-cough, death-rate .43.

One of diarrhoea death-rate 0.08. No death occurred from any of the other zymotic diseases. All died in the Dursley district.

Three died of Epidemic Influenza death-rate .26. One of enteritis death-rate .08. One of erysipelas death-rate .08. Nine of Phthisis death-rate .78. Other tubercular diseases 2.

Seven of Cancer death-rate .61. Thirty Respiratory diseases (Bronchitis, pneumonia, pleurisy) death-rate 2.6. Six from other diseases of respiratory organs. Three of Alcoholism, cirrhosis of liver. Two of premature birth. Two of diseases and accident of parturition. Twenty of heart disease, four

of accidents, 1 suicide, and sixty-four of all other causes.

There was no death from small pox, measles, scarlet-fever, diphtheria and membranous croup, Typhus, enteric or continued fever, cholera, Plague, Puerperal fever, other septic diseases or venereal disease.

Prospective. The completion of the house connections with the new sewers in Dursley and Cam.

I remain

Your obedient servant

F. J. J. J. J.

Medical Officer of Health

Eagle House  
Dursley

# Annual Report of the Inspector of Nuisances for the Year 1900

To the Dursley Rural District Council.  
Gentlemen,

During the Year I have made 54 visits to the Dairies and Milkshops in the parishes of the Dursley Rural District, - and in two cases only, did I find them in an unsatisfactory condition. One had a bad drain; and the other the sheds required lime-washing, both of which were put right.

One case of infectious disease occurred on the farm of Mr. J. Hills, Nympefield, - this being the only one.

The Common-lodging houses have been inspected regularly, there has been occasion to complain of floors of privy at W. Allen's, The Cloud, Wotton-under-Edge, and this has been put right.

There are 31 slaughterhouses in the District, and 92 visits made for inspection. I have had the drains taken out of one, which was in a very bad state, and new drains laid throughout. All the others were found to be satisfactory. There have been 14 infectious cases reported and 17 houses disinfected.

The Factories and Workshops have been visited and inspected. The Sanitary Commission much improved at Cam Mills, The Victoria Iron Works, and also at the River Mill, Dursley. I have made 135 inspections and served of Statutory notices for cleansing and lime-washing which have been carried out.

General Nuisances.

Complaints Received	24
Reported to Council	43
